

58. (New) The device of claim 57 wherein the filtering lobe is formed from the outward radial expansion of the medial region of the filtering mesh and the proximal movement of the distal end of the filtering mesh relative to the proximal end.

59. (New) The device of claim 58 wherein the retaining state is reached as the filtering lobe is urged in a proximal and radially inward direction.

Respectfully submitted,

JOHN M.K. DANIEL ET AL.

By their Attorney,
